EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Brian C. Trinqué on 06/15/07.

The application has been amended as follows:

Claim 1 has been amended as follow:

--*"A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:*

a first medication delivery means, wherein the said first medication delivery means is a pill; and

a second medication delivery means, wherein the said second medication delivery means is a capsule;

wherein the said first medication delivery means is connected or affixed by connection means to the said second medication delivery means in a chain, train or string fashion; wherein the connection means is a glue."--

Claim 2 has been amended as follow:

--*"A device for the simultaneous delivery of multiple medication products to a live body, with such device comprising:*

a first medication delivery means, wherein the said first medication delivery means is a pill; and

a second medication delivery means, wherein the said second medication delivery means is a capsule;

wherein the said first medication delivery means is removably connected or affixed by connection means to the said second medication delivery means in a chain, train or string fashion; wherein the connection means is a glue.”--

Claims 3-6 have been cancelled.

The following is an examiner's statement of reasons for allowance:

The closest prior art, Solomon et al., teach a solid pharmaceutical dosage form comprising a first tablet subunit and a second capsule subunit that is adhesively jointed to said first tablet subunit. However, Solomon et al. is not a prior art because of its' later filing date. Solomon et al. further does not teach connection means is a glue, nor Solomon et al. teach the multi-medication means are connected in a chain, train or string fashion. Applicant's specification shows that connection of the multi medication delivery means in a chain, train or string fashion to enable the patient to selectively remove and delete certain components of the medication does, to thereby facilitate ingestion by making the ingestion unit a smaller size, with the unit size to be determined by the patient, by adjusting the length of the chain (see present specification at page 11, 2nd paragraph).

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Claims 1 and 2 are allowed.
